RESEARCH INTERESTS

I am interested in the algorithmic and applied aspects of graph and hypergraph structured data and topological approaches for data analysis. I am also interested in the synergy between machine learning and network analysis. I have worked on the following topics over the years-

- **Graphs:** Co-evolution of software ecosystem networks. Topological analysis of graph structured data.
- **Hypergraphs:** Algorithms for generating and estimating properties of random hypergraphs with a prescribed constraint. Algorithms for visualising hypergraphs.
- **Topological data analysis:** Exact and approximate computation of topological features of Euclidean and graph data.
- **Optimisation:** Evolutionary algorithms for solving many-objective optimisation problems.
