# **RESEARCH INTERESTS**

I am interested in the algorithmic, applied and topological aspects of graph and hypergraph structured data as well as their application in machine learning. I have worked on the following topics over the years-

- **Graphs:** Designing physics-driven Graph Neural Networks for accelerating flow field prediction in complex aerodynamical systems. Reducing uncertainty of property estimation on uncertain graphs. Co-evolution of software ecosystem networks.
- Hypergraphs: Algorithms for finding core nodes in hypergraphs. Algorithms for generating and estimating properties of random hypergraphs with a prescribed constraint. Algorithms for visualising hypergraphs.
- Topological data analysis: Applying topology to improve robustness of Graph Neural Networks under adversarial setting. Designing algorithms to approximate and accelerate computation of topological features of Euclidean and graph data.
- Optimisation: Evolutionary algorithms for solving many-objective optimisation problems.
